ELOGIC

Technology applied to the Archive

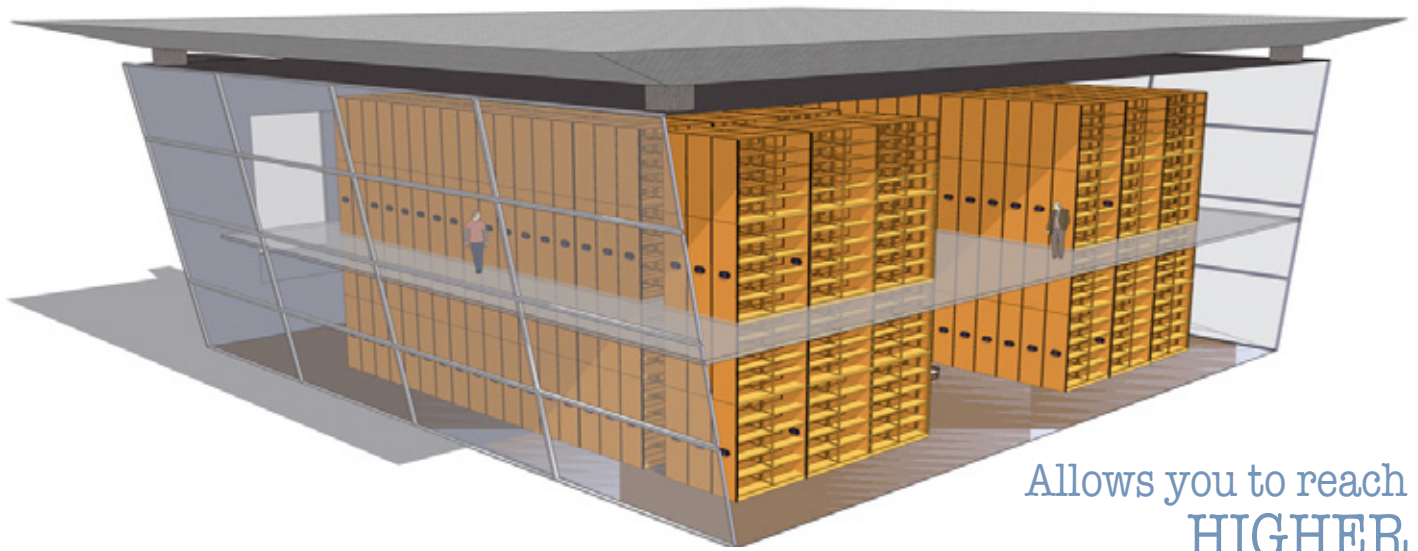

More Efficient management

Knowledge has always been key in achieving success. Having the right information at the right time, can be decisive.

Space, order, accessibility and preservation are essential elements in the Management of any archive.

E-LOGIC will help you manage your archive more efficiently, making organization easier, improving accessibility, providing solutions to improve the degree of conservation of archived items and allowing a better use of the available space.

HIGHER

Intelligent and Safe

The compact enclosures **E-LOGIC** move automatically. Each enclosure cabinet has a touch panel that allows you to activate the system and manage all the different functions, which is made possible by the cutting-edge electronic equipment. A light contact is enough to transmit your desired order. Features such as permitting or denying access to specific areas of the archive, programming automatic opening and closing schedules, modifying the speed of the enclosure, etc., are just some of the many possibilities that **E-LOGIC** offers you.

E-LOGIC only needs a conventional power outlet of 220 V to be installed. Its low power consumption allows the system to be incorporated to uninterrupted power supplies (UPS).

The **E-LOGIC** operating parameters can be modified from a program that works with Windows (OS). It can be modified from a PC or via local network.

E-LOGIC incorporates different security levels, ensuring a completely safe handling.

The use of **E-LOGIC** allows for maximum capacity in high spaces. **E-LOGIC** can incorporate a mezzanine level in enclosure cabinets with a height greater than 3 meters. In this case, the enclosure cabinet has a touch panel in each of its levels. The set integrates a stair to access the top level.

E-LOGIC also considers the incorporation and automatic management of lighting equipment in the enclosure cabinets.

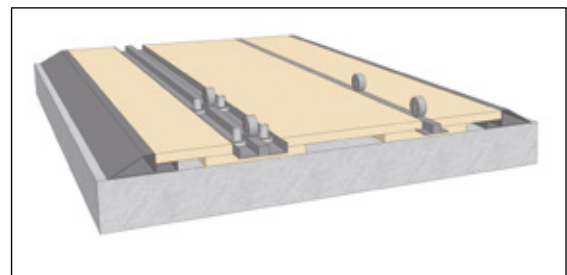

Your Archive on Wheels

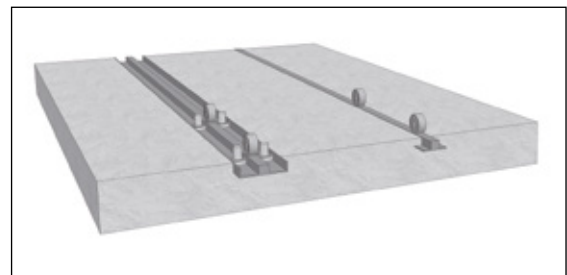

The **E-LOGIC** enclosure cabinets slide on high resistance calibrated steel rails. They can be placed directly on the ground or embedded in the pavement.

The "Platform" option does not require any type of installation work. The rails are directly levelled over the existing floor space; free areas are covered with other materials (pallets of different types) to prevent tripping. A built-in perimeter ramp is incorporated for easy access with transport carts.

The "Embedded" option can be directly performed on site (slab) with subsequent screed or through clearings in the existing pavement.

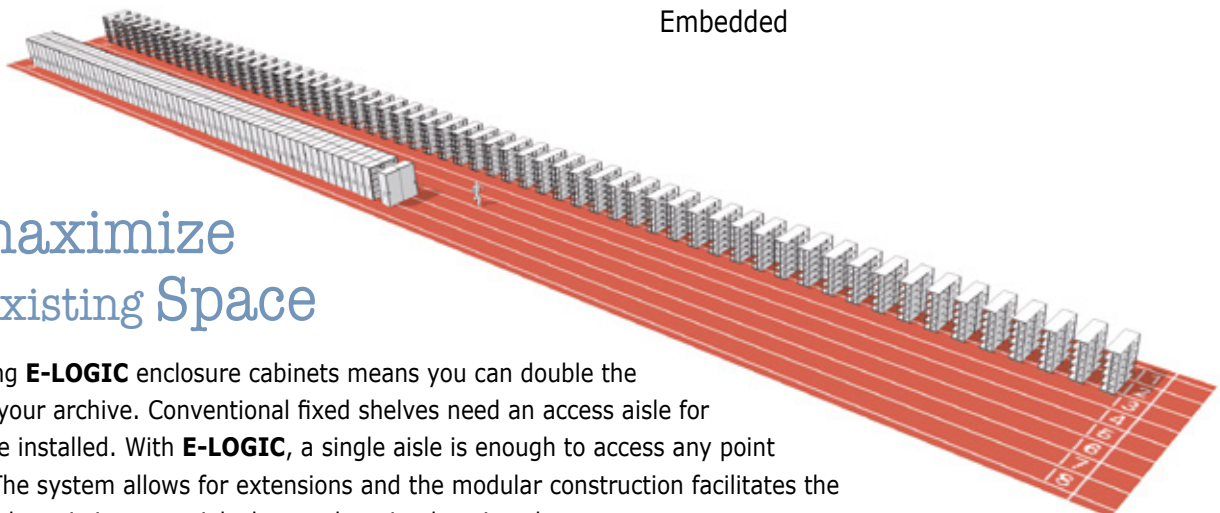

Platform

Embedded

We maximize your existing Space

Incorporating **E-LOGIC** enclosure cabinets means you can double the capacity of your archive. Conventional fixed shelves need an access aisle for each module installed. With **E-LOGIC**, a single aisle is enough to access any point in the file. The system allows for extensions and the modular construction facilitates the reuse of all the existing material when undergoing location changes.

Aesthetics, Functionality and Robustness

The **E-LOGIC** compact enclosures incorporate multiple accessories to adapt to the different needs of each archive.

We offer our customers the opportunity to customize their installation by choosing their preferred colour according to the RAL range and other finishes.

Aesthetics, functionality and robustness are requirements that have been present in the continuing evolution of our archive systems during our twenty years of experience.

We maintain our commitment with Quality as acknowledged by the ISO 9001:2000 accreditation in 1998, and the Environmental Management Control ISO 14001 implemented in 2002.
